### **Survey Background and Methodology**

The Internal Services Survey (ISS) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The ISS was developed to measure employee opinions about internal support services (i.e., human resources, facilities maintenance, fleet maintenance, purchasing, GIS, etc). These services rarely are delivered to residents at large and instead are provided to support staff delivering externally-aimed services. The ISS is a stand-alone survey containing a subset of questions from a larger survey called The National Employee Survey™ (The NES™), and provides local governments with the data necessary to meet the reporting standards for ICMA's Center for Performance Measurement™ (CPM™).

The City of Scottsdale elected to conduct the ISS with its employees. This was the first survey of its kind of Scottsdale employees. The results can be used by the City to better understand employee assessments of support services, identify opportunities for improvements and efficiencies and monitor perspectives over time.

The survey consisted of two questions asking employees to rate the quality and timeliness of a variety of internal support services and all were asked on a four-point scale (e.g., excellent, good, fair, poor). A third question on the survey asked employees to identify their management status.

All City of Scottsdale employees were invited to complete the Web-based survey in late February 2010. Employees were provided letters in payroll checks and brief updates in the weekly Employee Newsletter encouraging their participation. Over a two week period after the initial invitation was made, employees with email addresses also received two email reminder messages from NRC that contained the survey link. In addition, the City sent one final reminder email to all employees. Data collection continued through the second week of March. Of the 2,634 employees receiving an invitation to complete the survey, a total of 1,747 employees returned completed surveys, providing a response rate of 66%.

Since the surveys were completed online, the data were saved electronically. The data were then exported into a text-only format and the electronic dataset was imported and analyzed using the Statistical Package for the Social Sciences (SPSS). Frequency distributions for each question are presented in the body of the report. The anonymity of all employees is fully maintained as no names or other unique identifiers have been recorded.

### How the Results Are Reported

Frequency distributions (the percent of respondents giving each possible response to a particular question) are presented in the body of the report. A complete set of frequencies for each survey question is presented in *Appendix A: Complete Set of Survey Frequencies*.

For all of the questions in the survey, respondents could answer "don't know." The proportion of respondents giving this reply is shown in the full set of responses included in *Appendix A*. However, these responses have been removed from the analyses presented in the body of the report. In other words, the tables display the responses from respondents who had an opinion about a specific item.

When a question that only permitted a single response does not total to exactly 100%, it is due to the customary practice of rounding percentages to the nearest whole number.

### **Benchmark Comparisons**

NRC's database of comparative employee opinion comprises the perspectives of more than 4,200 employees gathered from employee surveys from local governments across the U.S. Employees evaluated the organization in which they work and gave their opinion about job satisfaction, supervisor relationships and other aspects of the employee experience. The City of Scottsdale was compared to the entire database. A benchmark comparison (the average percent positive from all the comparison organizations, including Scottsdale) has been provided when there were at least five organizations in which the question was asked. The percent positive response was created by combining the most favorable response options (i.e., "excellent" and "good").

Where comparisons are available, differences of more than five percentage points between Scottsdale's ratings and the average of the comparison employee ratings are considered statistically significant and thus are marked as "above" or "below" the benchmark. When differences between Scottsdale's ratings and the benchmarks are four percentage points or fewer, they are marked as "similar" to the benchmark.

# **Scottsdale Employee Survey Results**

The following pages contain a complete set of responses to each question on the survey excluding "don't know" responses.

### **Understanding the Benchmark Comparisons**

### Comparison Data

NRC's database of comparative employee opinion comprises the perspectives of more than 4200 employees gathered from employee surveys from nine organizations. Those employees evaluated the organization in which they work and gave their opinion about the delivery of internal support services. The City of Scottsdale was compared to the entire database. A benchmark comparison (the average percent positive from all the comparison organizations where a question was asked, including Scottsdale's) has been provided when there were at least five organizations in which the question was asked. The percent positive was created by combining the most favorable response options (i.e., "excellent" and "good").

### Interpreting the Results

Where comparisons are available, three columns are provided in the table. The first column is your organization's rating or percent positive (i.e., "excellent" and "good"). The second column shows the benchmark (e.g., the average percent positive of all organizations in the database including Scottsdale's), and the third column is a comparison of your organization's rating (column one) to this benchmark.

The comparisons of "above," "below" and "similar" come from a statistical comparison of your organization's rating to the benchmark (the average percent positive from all the comparison organizations). Differences of more than five percentage points between Scottsdale's ratings and the average of the comparison organizations are considered meaningful and thus are marked as "above" or "below" the benchmark. When differences between Scottsdale's ratings and the benchmarks are four percentage points or fewer, they are marked as "similar to" the benchmark.
